

# BUNKER — HOMES —

BULLET-PROOF  
SHUTTER

SOIL

**Wonderful Structures** manufactures **Bunker Homes** that can be fully covered with soil and vegetation at the thickness of your choice, enhancing structural protection and overall security.

Additionally, we offer **bulletproof shutters** reinforced with **Kevlar** fibers to protect windows and access doors.

SHUTTER

Window

1. Install the **protective shutters** over the windows, securing them with Peek bolts.

2. Completely cover the window with **2 to 3 feet of earth** to ensure full protection.

2–3 feet (60–90 cm) of earth act as a **natural protective mass** that attenuates and dissipates electromagnetic energy generated by a solar storm.

The soil **reduces radiation penetration** and helps protect the interior and electronic equipment by functioning as a natural shield.
